

EASILY MANAGE YOUR NSQHS AND ISO ACCREDITATION

The new LOGIQC Accreditation Module significantly reduces the time and effort required to maintain your accreditation with the NSQHS and ISO 9001 standards.

How LOGIQC can help you with accreditation against the National Safety and Quality Health Service (NSQHS) Standards

The LOGIQC quality management system now includes an accreditation module that makes it easy to prepare for and maintain accreditation.

The time involved in preparing for external audits and the stress of compliance can come at a real cost to a business. LOGIQC's Accreditation Module integrates with other registers activated in your system, making it easy to generate a report on how well you meet standards and what needs to be done before your next audit.

Designed specifically for healthcare services in Australia and New Zealand, the Accreditation Module can be pre-loaded with the national quality management standards and other standards which saves time on setup work. And with LOGIQC's support resources you'll see a list of recommended actions required against each standard.

LOGIQC is software purpose-built for healthcare organisations and with the new Accreditation Module you can:

- Link your documents, audits and other activities to NSQHS requirements and generate an evidence report
- Set automatic reminders to prepare for external audits detailing what needs to be done
- Conduct a self-assessment and generate an action plan
- Give your auditor online or on-site access to view your evidence report
- Benefit from LOGIQC's 'knowledge bank' of examples and pre-loaded requirements for compliance with standards

LOGIQC is cloud-based software for managing safety, quality and risk. It is specifically designed to support healthcare organisations to meet accreditation requirements, drive improvement, and manage risk.

As a cloud-based task management system, LOGIQC enables your business to go paperless and access information online - anywhere, any time. LOGIQC's integrated suite of registers can be configured to meet your specific requirements for:

- Risk, compliance and document control
- Reporting and managing incidents and complaints
- Internal audit and service improvement
- Trend reports and task monitoring

LOGIQC is the system of choice for many day hospitals, GP practices, primary health care services and health related NGOs across Australia and New Zealand.

The NSQHS Standards require organisations to implement:

- a governance system for policies, procedures and protocols;
- an organisation-wide quality management system;
- an organisation-wide risk management system;
- an incident and complaints management and investigation system;
- a system for undertaking regular clinical audits and recording improvement actions; and
- a system for ensuring required training is completed and evidenced.

The LOGIQC Quality Management System has been designed to meet all of these requirements and more.

With LOGIQC you can:

- Identify and track accreditation and compliance related tasks
- Identify, assess, rate and track risks and their related controls
- Record and manage incidents and complaints
- Schedule audits and upload the results into one central register
- Generate improvement actions responding to audit outcomes or non-conformances
- Maintain a central library of version controlled documents including policies, procedures and forms
- Schedule training and credential checks and upload certificate and other evidence
- Generate trend reports tracking clinical incidents and risks
